

MAYON VOLCANO UPDATE
 RELEASED: 15 April 2008; 8:00 AM

Alert Level: 1

MONITORED PARAMETERS	OBSERVATIONS DURING THE PAST 24-HOUR PERIOD	PREVIOUS OBSERVATIONS
Seismicity	Seismographs under repair	The seismic network recorded no volcanic earthquake. <i>(07 – 13 Apr. 2008)</i>
Ground Deformation <i>(Precise Leveling results)</i>	Survey on scheduled basis	Lidong Leveling line <i>(Feb. 22, 2008 survey)</i> Three (3.0) millimeters deflation
Crater glow	Obscured	Intensity I <i>(07 – 13 Apr. 2008.</i>
Steaming Activity	Obscured	 Weak to moderate <i>(07 – 13 Apr. 2008)</i>

REMARKS/RECOMMENDATION:

Mayon Volcano's status remains at Alert Level 1. This means that a hazardous eruption is unlikely. The public, however, is reminded that the 7-km Extended Danger Zone (EDZ) at the southeastern flank of the volcano and the 6-km radius Permanent Danger Zone (PDZ) at other areas remain off-limits due to the continuing threat from sudden small explosions and rockfalls from the upper slopes. Active river channels and those areas perennially identified as lahar-prone around the volcano should be avoided when there is heavy and prolonged rainfall.

Note: This serves as the official PHIVOLCS bulletin for today.
