

## MAYON VOLCANO UPDATE

RELEASED: 12 May 2008; 8:00 AM

Alert Level: 1

MONITORED PARAMETERS	OBSERVATIONS DURING THE PAST 24-HOUR PERIOD	PREVIOUS OBSERVATIONS
<b>Seismicity</b>	One(1) high frequency and two (2) low frequency volcanic earthquakes were recorded.	The seismic network recorded one (1) and one (1) low frequency volcanic earthquakes. (05 - 11 May 2008)
<b>Ground Deformation</b> <i>(Precise Leveling results)</i>	Survey on scheduled basis	<b>Lidong Leveling line</b> (22 Feb. 2008 survey) Three (3.0) millimeters deflation
<b>Crater glow</b>	Intensity I	Intensity II (05 - 11 May 2008)
<b>Steaming Activity</b>	 Moderate	 Moderate (05- 11May 2008)

### REMARKS/RECOMMENDATION:

Mayon Volcano's status remains **at Alert Level 1**. This means that a hazardous eruption is unlikely. The public, however, is reminded that the 7-km Extended Danger Zone (EDZ) at the southeastern flank of the volcano and the 6-km radius Permanent Danger Zone (PDZ) at other areas remain off-limits due to the continuing threat from sudden small explosions and rockfalls from the upper slopes. Active river channels and those areas perennially identified as lahar-prone around the volcano should be avoided when there is heavy and prolonged rainfall.

**Note: This serves as the official PHIVOLCS bulletin for today.**
